

JAVIER MARTINEZ

AI Product Manager · Workflow Automation · Technical PM

javi15martinez@gmail.com · +54 9 266 466 2466 · Argentina — open to remote / relocation (EU auth in process, Spain 2026) · [linkedin.com/in/javiermartinez-pm](https://www.linkedin.com/in/javiermartinez-pm)

PROFESSIONAL SUMMARY

Technical PM and product builder with 11+ years managing complex systems and teams. I work at the intersection of product management and AI-assisted development — using Claude, Antigravity, and n8n as core building tools, not shortcuts.

Recent builds: an internal A3 process management app at INVAP (React, Node.js, PostgreSQL, Docker, Claude as AI agent — full cycle, end to end, currently in pilot) and a full automation stack for Metamorfosis Origen: content pipeline publishing to 4 networks simultaneously (4 hours → 10 minutes) and a WhatsApp lead system handling 75+ contacts automatically.

EXPERIENCE

AI-assisted Product Builder | INVAP — Internal Project · 2025 – Present

Internal web application for A3 problem-solving process management — full cycle, end to end.

- Led full product lifecycle: stakeholder interviews, requirements, architecture, and delivery within INVAP's intranet.
- Built using React (frontend), Node.js (backend), PostgreSQL, Docker, and Git — using Claude as AI development agent throughout.
- Currently in pilot, replacing a manual, untracked process with a structured knowledge base.
- First production experience directing AI agents to deliver software — actively building at the intersection of PM and AI-assisted development.

Co-founder & AI Automation Builder | Metamorfosis Origen · 2022 – Present

Personal transformation platform — full digital product and automation stack, built and operated independently.

- Extended and dockerized existing PHP platform: payment integration (MercadoPago + PayPal, multi-country), landing pages, Cal.com integration.
- Built content automation pipeline with n8n: 4 social networks simultaneously, scheduled and instant publishing, Notion as zero-code content DB — 4 hours of work reduced to 10 minutes.
- Built WhatsApp lead re-engagement system: 75+ leads handled automatically, number rotation to avoid bans, personalized messaging across funnel stages.
- Developed Android app (WebView + native features): push notifications, persistent login, navigation enhancements — distributed via APK.

Technical Product Manager | INVAP — Space & Radar Systems · 2023 – Present

Argentina's national aerospace company — satellites, radars, nuclear systems. Programs include CONAE missions and national defense systems.

- Product lead for a real-time radar operator console for a mobile defense system — owned requirements, architecture, and delivery end-to-end.
- Technical PM for the SVF (Satellite Flight Software Simulator): rescued a disorganized project, restructured stakeholder management, and delivered the product now used for all satellite software validation.
- Contributed to SABIAMar, SAOCOM next-gen, and ARSAT SmallGEO — mission-critical programs with zero margin for error.

- Managed multidisciplinary teams of 5–10 engineers across software, systems, and hardware.

Founder & Automation Consultant | [Aljane — Freelance](#) · 2018 – 2022

Independent technical consultancy running in parallel to full-time roles — 40+ projects delivered.

- Delivered automation projects for manufacturing clients across San Luis (including Dos Anclas), owning every phase from client brief to commissioning.
- Built and led a freelance operation end-to-end: client acquisition, technical proposals, budgets, execution, and reporting.

Prior Engineering & Leadership Experience · 2015 – 2022

Head of Maintenance & Engineering — Marfrig Argentina SA (2020–2021): led team of 50 across engineers and technicians; coordinated full plant automation upgrade (PLC/SCADA) in a 1,000+ employee facility.

Project & Operations Engineer — DIASER SA (2018–2020): end-to-end construction and commissioning of a 30 MW solar plant. Two-person staff managing international contractors, imports, and operations.

Electrical & Automation Engineer — Kimberly-Clark SA (2015–2018): automation specialist on high-speed production lines; 100-hour Electrical Skills program in Wisconsin, USA; Harvard ManageMentor leadership programs; Lean Manufacturing and TPM.

SKILLS & TOOLS

AI & Automation: Claude · Google Antigravity · n8n · Prompt engineering · AI-assisted development · Multi-agent systems · WhatsApp Business API · Meta Ads

Tech Stack (AI-directed): React · Node.js · JavaScript · PostgreSQL · PHP · Docker · Git · REST APIs

Product & Strategy: Product ownership · Requirements gathering · Roadmapping · Stakeholder management · Agile/Scrum · Jira

EDUCATION

Electronic Engineering Degree · Universidad Nacional de Córdoba (UNC)

Business Administration (MBA) · Universidad Nacional de Cuyo · All coursework and exams completed, thesis pending

LANGUAGES

Spanish (Native) · **English** (Professional working proficiency) · **French** (Basic)
