SUMMARY

Product manager with 11 years in complex, high-consequence systems: space, defense, nuclear, manufacturing and energy. I define the problem first, then ship it — seven production systems delivered by directing AI agents as the development engine, from stakeholder discovery to rollout. Currently building AI solutions for management processes across a nuclear business unit at INVAP.

> **Target roles:** AI Product Manager · AI Product Owner · Technical Product Manager · AI Automation Lead. **Open to:** fully remote, or relocation to the EU (Spanish citizenship in process, 2026).

CORE SKILLS

AI and Automation: AI agents, LLM orchestration, RAG (Retrieval-Augmented Generation), prompt engineering, multi-agent systems, workflow automation, n8n, Claude, Google Antigravity

Product: Product management, product ownership, stakeholder discovery, requirements engineering, roadmapping, prioritization, product lifecycle, Agile, Scrum, Jira

Engineering (AI-directed): React, TypeScript, Node.js, NestJS, Fastify, PostgreSQL, MySQL, Prisma, Redis, PHP, Docker, GitLab CI/CD, REST APIs

Industrial: PLC/SCADA, Lean Manufacturing, TPM, 5S, project commissioning

PROFESSIONAL EXPERIENCE

INVAP — Argentina's national technology company (space, radar, nuclear)
Full-time | August 2022 - Present | San Luis, Argentina

AI Product Lead, Business Operations | **July 2026 - Present**

AI-driven solutions for management processes across the nuclear business unit, within the Engineering and Production division.

- Building AI systems for supplier management, workforce planning, people capabilities, training, budgeting and purchase orders.
- Working directly with division and department heads to turn undocumented manual processes into structured, searchable systems.
- Scope spans functions rather than a single product: the division's way of working.

AI Product Manager, Internal Platforms | **December 2025 - June 2026**

Four production systems delivered end to end, directing Claude as the development agent.

- **Engineering and Production Management Platform:** replaced departmental spreadsheets with a unified system including a skills inventory. 12 capabilities, 107 granular permissions, 3-layer authorization. React, TypeScript, NestJS, PostgreSQL with row-level security, Redis, Docker.
- **5S Lean Management Platform:** digitized the industrial 5S cycle (audits, findings, dashboards). 42 capabilities, 95% test coverage. React, TypeScript, Node.js, MySQL, GitLab CI.
- **A3 Process Management App:** full lifecycle from stakeholder interviews to pilot, replacing a manual, untracked process with a structured knowledge base.
- **Apps Project Template:** monorepo starter with authentication, RBAC, audit trail and CI/CD pre-built. Cut developer onboarding from 1 week to 3 days.
- Method: modular code generation, sub-agents coordinated per feature, and a structured prompt system to manage complexity at scale.

Technical Product Manager, Space and Defense Systems | **August 2022 - December 2025**

Product and technical lead for mission-critical simulation and radar systems.

- Rescued the Satellite Flight Software Simulator (SVF), a disorganized project: restructured stakeholder management, redefined requirements, and delivered a product now used for all satellite software validation.
- Owned the full product lifecycle for satellite and radar systems: requirements, architecture decisions, roadmap and delivery.
- Led multidisciplinary teams of 5 to 10 engineers across software, systems and hardware.
- Contributed to SABIAMar, SAOCOM next-generation and ARSAT SmallGEO.

Metamorfosis Origen — Co-founder and Product Lead

Self-employed | June 2022 - Present | San Luis, Argentina

Full digital product and automation stack, built and operated independently.

- Content automation pipeline (n8n, Notion, four social network APIs): reduced publishing from 4 hours to under 10 minutes per session.
- WhatsApp lead re-engagement system: 75+ leads handled automatically, sender-number rotation, stage-based personalized messaging.
- Web platform: PHP, subscription management, MercadoPago and PayPal across multiple countries, full Docker infrastructure.
- Android app (WebView plus native features): push notifications, persistent login, distributed via APK.
- In progress: RAG assistant over a private corpus, with fully local inference — no data leaves the machine.

EARLIER EXPERIENCE — INDUSTRIAL ENGINEERING AND OPERATIONS LEADERSHIP

Avery Dennison — Head of Maintenance and Projects

2021 - 2022 | San Luis, Argentina

Marfrig Argentina — Head of Maintenance and Engineering

2020 - 2021

- Led 50 engineers and technicians; coordinated a plant-wide PLC/SCADA automation upgrade in a 1,000+ employee facility.

DIASER — Project and Operations Engineer

2018 - 2020

- End-to-end construction and commissioning of a 30 MW solar plant, with a two-person staff managing international contractors, imports and operations.

Kimberly-Clark — Electrical and Automation Engineer

2015 - 2018

- Automation specialist on high-speed production lines. 100-hour Electrical Skills program (Wisconsin, USA), Harvard ManageMentor, Lean Manufacturing, TPM.

Aljane — Founder and Automation Consultant (freelance, in parallel)

2018 - 2022

- 40+ automation projects for manufacturing clients, owning every phase from client brief to commissioning.

EDUCATION

Electronic Engineering — Universidad Nacional de Córdoba (UNC)

MBA, Business Administration — Universidad Nacional de Cuyo. Coursework and exams completed, thesis pending.
